

TalkShow® VS 100

Premium production capabilities for professional-grade Skype calls.

Control every call with complete confidence.

With the most comprehensive set of integrated production capabilities available in any Skype TX single-caller video calling system, TalkShow VS 100 gives you total control of your video interviews before, during, and after the show.

Reach 300 million monthly Skype users with:

- 1-in, 1-out HD-SDI connections
- Industry-standard XLR and SDI-embedded audio
- Professional audio tools, auto color, and proc amp controls
- Space-saving 1RU rack mount

Enhance every video interview.
Deliver great conversations.

Operate all aspects of a live Skype video call from the control room like any other video source—free of audio/visual distractions such as secondary call notifications and advertisements.

Independent call management and production control interfaces

Advanced color configuration and video controls

Integrated professional audio toolset

IP Networking

Receive video calls over IP anywhere on your network. Built-in NewTek NDI technology allows routing of Skype video calls to any compatible NDI receiving device (including TriCaster® and 3Play™) while enabling selection of any NDI video source for return to caller over the network.

Advanced Audio

Deliver conversations that sound more professional. Independently adjust incoming and outgoing audio signals for the highest-quality sound, with the only single-channel video calling system that offers built-in gain control, graphic equalizer, and compressor/limiter.
